SAMPLE: Improving Imaging Referral Quality with a Structured Checklist

TEST MATERIAL ONLY - FICTIONAL AUTHORS AND DATA

Alex Example; Taylor Sample | Fictional Health Sciences Teaching Unit

Abstract

Background: Complete referrals support effective imaging decisions. Objective: Demonstrate a structured submission using fictional teaching data. Methods: A simulated audit compared 20 fictional referrals before and after a checklist exercise. Results: Complete referral fields increased from 12 of 20 to 18 of 20. Conclusion: This example demonstrates manuscript formatting and the review workflow. The figures are invented and must not inform clinical practice.

Keywords: imaging, referral quality, checklist, education

Introduction

This short manuscript provides realistic fields and structure for testing the FHST portal. All names, organisations and findings are fictional.

Methods

No patients or real participants were involved. The exercise uses invented counts solely to demonstrate the submission and review process.

Discussion

Reviewers can request clearer methods, check the abstract and recommend a revision. Authors can edit this Word file, export a revised PDF and upload it through the portal.

Declarations

Funding: none. Conflicts: none. Ethics: no real research was conducted. Publication permission: this fictional sample may be used within the test platform. It is not an approved FHST publication.
